

Carl Evanger

Electrical Technician / Atex Inspector

36 Fairfield Road, Scartho, Grimsby, NE Lincs, DN33 3DU
07776 128067
carl.evanger@hotmail.com

A self-motivated, pro-active and highly skilled Electrical Technician/ Atex Inspector with a completed Indenture and 20 years industry experience carrying out electrical repair, maintenance, installation & testing of LV systems for prestigious organisations in hazardous oil, gas and chemical plant environments.

Highly organised with excellent attention to detail and an ability to motivate teams and individuals to perform consistently at the highest level, maintaining a focus on delivering works to specification, within allocated programme of works and maintaining compliance with robust safe systems of work and HASAW policies and regulations

Now looking to secure a new and challenging position with a forward thinking organisation where skills, experience and personal attributes will be fully utilised

Key Skills:

- Carrying out electrical maintenance, repairs, fault diagnosis, installations and Ex inspections
- Reading and understanding complex wiring, schematic and isometric drawings
- Supervising and leading a team to deliver works to demanding specifications
- Carrying out risk assessments working within safe systems of work and permit to work systems
- Managing and prioritising workloads to achieve deadlines and milestones

Professional Experience:

Company:	SPIE Ltd / AMEC FW / DRON & DICKSON
Position:	Offshore Electrical Technician / Ex Inspector
Date:	June 2006-Present

Key Responsibilities:

Carrying out a wide range of electrical & instrumentation services in demanding offshore environments including potential explosive atmospheres, responsibilities include:

- Reading and understanding complex wiring, isometric and schematic drawings, carrying out works as per drawings-building in changes to drawings as required
- Carrying out EX Inspections, preventative maintenance & corrective maintenance / repairs.
- Using skills and knowledge to diagnose faults, ensuring all repairs are carried out in a timely manner to minimise plant downtimes
- Working with HV/LV distribution, MCC 415v/3.3Kv drives and control systems, variable speed drives, UPS battery backup systems, battery discharge tests, repair & maintenance, soldering and fire/gas alarms
- Installing and maintaining temporary supplies fed from diesel generators
- Isolating and decommissioning of redundant electrical and instrumentation systems
- Wiring of IS and non-IS instrumentation to TDC systems and ESD systems
- Supervising staff, allocating work schedules and checking that all works are to specifications required
- Monitoring performance against agreed programme, reallocating resources as required
- Carrying out risk assessments and operating within the permit to work system
- Working harmoniously with other disciplines offshore
- Completing all relevant site and safety documentation

Locations:

- Centrica Rough Field Gas Platform (2008-Present)
- Conoco Phillips Britannia Platform (2007-2008)
- Shell Leman NUI Gas Platforms (2006-2007)
